

Engagement findings

Findings from the ‘Your voice, your data, your say’ engagement between May and early September 2018.

The report points to a significant opportunity the Government shares with the social sector, to do what works for better lives. It's important more New Zealanders know what people think about Government’s approach to investing for social wellbeing, and how the social sector uses data.

We’ve chosen to present the report in a way that is ‘true to the voice’ of participants by incorporating well over one hundred anonymised quotes, thoughts and ideas presented by participants who contributed throughout the engagement. The report summarises what each of the participant groups - service users and disabled people, service providers, Māori, Pacific peoples and other national government agencies – told us.

How we summed up what we heard

This document explains the steps we took to analyse and summarise what we heard from all hui participants and survey respondents. In this document we also explain the principles we used to guide our analysis method, so that we could present the

engagement findings in a way that is ‘true to the voices’ of the many people who contributed.
